

In an environment where the rapidly increasing global competition in the 21st century is reshaping the world economy, it is inevitable for companies to develop new strategies for their survival, growth and development. In this great transformation process, which is called the new economy, companies can find themselves against new competitors in the markets they used to dominate. Such a development can bring the lost market shares and gradually decreasing profit margins to the agenda. In these very difficult competitive conditions, the rules of the new competition are formed by the customers who are accepted as the new kings of the market. In these changing and developing new market conditions, continuity in quality, investment in technology, flexible production, constant change, the importance attached to customer satisfaction, and the strong bond between brand and consumer stand out. Taking advantage of these new dynamics of the market, Fanset renews its existing marketing strategies in line with its customer-oriented marketing approach with its strong management team on the one hand and continues its investments in production technologies and R&D on the other hand.

Fantom, which is not only a brand created by its products in the electrical household appliances market, but also a leading corporate brand in the sector as an institution, will continue to be the leading brand of the sector in the future as it is today. One of the most important factors behind Fanset's strong forward goal is the high variety of product portfolio. Having succeeded in creating new markets for itself with new products, Fanset has succeeded to become one of the leading manufacturers of the world with its cleaning floor trolleys and professional vacuum cleaners under the Fantom Professional brand. Companies play an active role in the spread of exports to international markets, is the driving force of economic development, especially in developing countries such as Turkey. For this purpose, our companies need to develop their export and marketing strategies nationally, to form export marketing strategies that will increase their market share in the long term instead of short-term profit or sales increases, and to establish long-term cooperation by focusing on these strategies.

In this context, Fanset is a candidate to become the new power of our country in international markets as a company exporting to 52 countries around the world. On behalf of the Fanset Group, once again I would like to thank our employees, suppliers, dealers, distributors and most importantly our dear customers who have made Fantom a strong brand in its sector in the 40 years that have passed since its establishment and who have been with us by embracing our dreams.

Adnan Tangüler

**2000 W**

## Grilletta TM 9100 Grill and Toast Maker

The heat adjustment button allows you to prepare your toasts and grills according to your taste. It prevents food from sticking to the plate with its non-stick casting plate. Since the resistance embedded plates shorten the time it takes for heat to affect the food, you can cook more in a short time. With the spatula, you can remove cooked food from the plate without touching the plate with your hand. When you are not using it, you can protect your toaster by locking its upper and lower body with the locking latch. You can also use it in grill position by opening the upper body 180°. You can adjust the height of the upper plate with the step adjustment. It allows the oil coming from the oil chamber and oil channels to accumulate and be easily cleaned.
